

## Scope of Work for Tank Content Testing and Removal

### **4735 Federal Center South East Marginal Road Seattle, WA**

Firm will provide an assessment of the quality and volume of the fuel oil within three Bunk C fuel oil underground storage tanks located at the southwest corner of the proper near the BIA building.

#### Scope of Work

1. Firm will go on site and review available “as-built” drawing to determine exact UST locations, configuration and dimensions of USTs, and fuel port locations and operational status.
2. Firm will collect samples of product that exists in UST tanks for analysis to determine fuel oil composition and quantities. Analyze samples for the presence of diesel-range total-petroleum hydrocarbons by Ecology Test Method NWTPH-Dx (Diesel extended)  
And estimate volumes of fuel in each tank.
3. Upon receiving the laboratory analytical results, EHS will prepare a report detailing the results of the sampling and distribution to a license recycling contractors, conduct site visits with contractor and obtain quotations for the removal of the fuel oil.
4. Firm will report the results of the sampling and provide GSA with Schedule and cost estimate for the removal of the fuel.
